This article examines the theories that explain loneliness from the psychological perspective, and evaluates the research literature in support of these theories. As the number of adults living alone increases, there are associated serious health risks for this group of isolated individuals. In addition to increasing the risk of mortality, an increasing number of people with mental health concerns are living alone, putting them at risk for psychiatric morbidity. These problems may be compounded if social isolation is part of the disorder. In the long-term, this may also have a significant economic cost. The article concludes with a discussion of why loneliness is so important to consider from the social psychology point of view, and why it is so necessary to have interventions that are based on sound theory and scientific evidence.
